

Aggregation

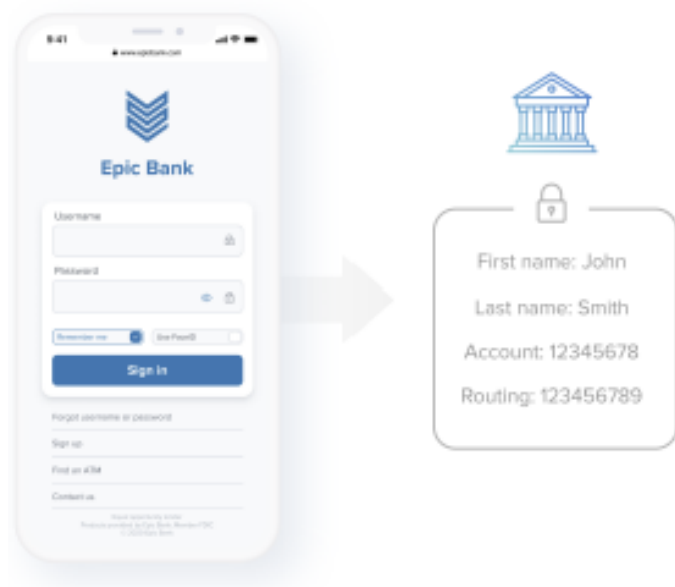

Unmatched Connectivity

MX Aggregation utilizes patented connectivity and next-gen connections to give organizations the ability to instantly connect to customer account information and verify and authenticate identity, assets, balances, and amounts.

Connect to the data that matters most

Impactful Money Experiences are powered by quality financial data, but accessing that data isn't always easy. MX has relationships with top financial institutions to ensure consumer financial data is accurate, reliable, and secure, so you can offer your consumers a seamless and easy path to all of their financial accounts — in the palm of their hand.

Dependable Connections Through Industry-Leading Technology

Aggregation is powered by an industry-leading 50,000 connections with 16,000 financial institutions. In addition to offering the latest direct OAuth open banking connections, our patented technology has backup connections on standby that increase aggregation success and minimize outages.

Data to Power Nearly Any Money Experience

Our 50,000 connections provide reliable access to more data fields, meaning Aggregation can power nearly any use case.

Account Verification

Simplify the customer journey and reduce abandonment by minimizing friction points around connecting accounts and verifying assets and identity. With real-time access to accurate financial data, organizations have the information needed to power their product, from making informed lending decisions to enabling seamless money movement.

Account Data

Aggregation provides connections to accounts and transaction history to provide customers with richer experiences, strengthen brand loyalty, and increase wallet share. With a comprehensive view of a consumer's financial life, organizations can create better experiences and solutions targeted toward their consumer's needs.

Fast, Secure, and **Credential-Free**

Open banking connections replace credentials with tokens, bringing higher levels of security and connection success rates. With faster speeds than ever before and connections that can withstand password changes, your customers will be happy, and your data will never stop flowing.

Streamline Onboarding

With just 6 lines of code you can implement our flexible, unbranded user interface that intelligently prompts users to connect to known accounts. Behind the curtains, Connect Widget ensures a smooth onboarding experience by expertly navigating MFA and other connection hurdles to increase connection success.

Better Data, **Better Experiences**

Aggregated data sources each have their own format for their data. MX's Data Enhancement engine converts aggregated transaction data into legible descriptions, categorizes it with industry-leading categorization coverage (99%) and accuracy (97%), and appends it with logos, transaction types, and more so that it's digestible by your customers, and your machine learning tools.
